Profile

Five years in customer experience at ModSquad, from the front line to project management. I lead a multilingual support team of about twenty advisors, own the KPIs, quality and coaching rhythm, and build the tools that keep repetitive work off the team's plate. One rule I never bend: internal and customer data stays out of AI tools.

Experience

ModSquad Remote

Assistant Project Manager 2025 to present

- Manage a multilingual team of about twenty advisors on a major consumer software account.
- Own KPIs, quality reviews, one to one coaching and scheduling.
- Built a Team 360 dashboard that pulls performance, quality and coaching data from 13+ spreadsheets and calendars, and flags overdue reviews automatically.
- Built a feedback library web app where every advisor sees their own quality feedback and coaching notes, with a read only view for project managers.
- Built an availability and alerts system with an emergency button, a Telegram bot and a monthly report.
- Designed coaching forms drafted with the Claude API that never receive names, customer conversations or performance data.

Team Lead

- Moved from answering tickets to helping others answer them: coaching, quality reviews, shift coverage and first point of escalation.

Customer Success Specialist

- Answered customers directly on the front line and learned what a clear process does for the person giving the answer.

Skills
